CLEANSLATE APPLICATION PROPOSAL

Automated Personal Bankruptcy Management Platform

DATE

October 28, 2026

SUBMITTED BY

Product Development Team

PROJECT TYPE

Internal Portfolio Platform

Welcome To CleanSlate

Going through bankruptcy is one of the most stressful and confusing experiences a person can navigate. CleanSlate is engineered to act as a trusted digital resource that answers complex questions and simplifies statutory monthly income and expense reporting. This project proposal sets out the architectural design, feature scope, bank syncing capabilities, AI transaction categorization, and receipt storage workflows necessary to build a complete web application. By automating statutory Form 65 compliance, CleanSlate turns compliance into a predictable, manageable daily routine.

Contents

This proposal outlines the platform architecture, technical specifications, and delivery schedule for the CleanSlate web application.

CleanSlate Technical Proposal

CleanSlate is engineered as a dedicated digital assistant designed to guide individuals through the stringent compliance demands of personal bankruptcy.

ARCHITECTURAL VISION AND OBJECTIVES

Individuals undergoing personal bankruptcy face strict statutory reporting requirements overseen by Licensed Insolvency Trustees. Debtors are obligated to submit monthly income and expense statements (Form 65), detail non-discretionary expenses, and provide receipt validation. CleanSlate addresses this administrative burden by modernizing receipt upload, transaction categorization, and bank statement syncing into a unified web application.

Our development strategy prioritizes high accuracy, secure data handling, and empathetic user experience design. By pairing automated bank account integration with intelligent machine learning categorization, CleanSlate removes guesswork for debtors. Users maintain full oversight of their financial history while ensuring trustees receive accurate, timely reports critical for early bankruptcy discharge.

Why Choose CleanSlate Solution

CleanSlate transforms insolvency reporting from a stressful administrative burden into an automated, guided digital process.

01

Empathetic UX Guidance

Designed specifically for users facing immense personal stress. The interface breaks daunting statutory forms into clear step-by-step prompts, clarifying non-discretionary category definitions.

02

AI Transaction Intelligence

Integrated machine learning classifies bank statement uploads automatically. The system queries ambiguous ledger items directly with the user and learns custom rules over time.

03

Proof & Receipt Vault

Built-in document storage links medical prescriptions and mandatory expense receipts directly to monthly report lines, satisfying trustee audit verification standards.

04

Automated Trustee Delivery

Compiles structured Form 65 income and expense filings directly for Licensed Insolvency Trustees, ensuring full statutory compliance and timely monthly submissions.

Core Platform Strengths

The platform architecture focuses on secure data synchronization, intuitive user interaction, and exact statutory form alignment.

ENGINEERING PRINCIPLES

CleanSlate combines real-time banking integrations with structured document management to ensure full data integrity throughout the bankruptcy term.

Bank Auto-Sync

Weekly automated synchronization across connected bank accounts and credit cards, supplemented by manual instant-sync triggers to maintain real-time account balances and transaction feeds.

Form 65 Accuracy

Direct mapping to Canadian statutory monthly income and expense statements. Automated surplus income calculations follow official Superintendent of Bankruptcy standards precisely.

Security & Vault

Encrypted document storage linking uploaded receipts and prescriptions directly to ledger line items, providing complete verification records for trustee compliance audits.

DEVELOPMENT STANDARDS

CleanSlate will be built using modern web frameworks with bank-grade encryption protocols. The solution prioritizes high availability, strict privacy protection, and responsive usability across desktop and tablet interfaces.

Debtors Current Reporting Challenges

THE USER EXPERIENCE PROBLEM

Filing for personal bankruptcy introduces intense anxiety and administrative confusion. Debtors are forced to manually track every purchase, sort paper receipts, and categorize discretionary versus non-discretionary expenses. Missed monthly report deadlines on the 15th of each month risk delaying statutory discharge and triggering financial penalties.

Furthermore, debtors struggle to differentiate complex categories like spousal support, non-recoverable medical expenses, or employment deductions. Without clear real-time guidance, users make frequent reporting errors, forcing Licensed Insolvency Trustees to request time-consuming manual revisions.

CORE PROBLEM STATEMENT

Existing insolvency tools are built for trustees rather than debtors. CleanSlate bridges this gap by providing an intuitive consumer software experience that turns complex statutory reporting into a guided routine.

Debtors Insolvency Goals

To successfully complete bankruptcy obligations, debtors require clear tools that support timely monthly submissions and accurate record-keeping.

01

On-Time Statutory Monthly Reporting

Debtors need clear visibility of submission deadlines due on the 15th of every month. Automatic alerts ensure reports are filed promptly to remain on track for early discharge.

02

Automated Transaction Categorization

Eliminate manual data entry by uploading bank statements or syncing bank accounts. Intelligent algorithms assign transaction lines to Form 65 expense categories accurately.

03

Digital Receipt Storage & Audit Linking

Store prescription receipts and non-discretionary proofs in a centralized digital repository. Link receipt image records directly to report entries for immediate trustee validation.

04

Surplus Income Calculation Transparency

Understand exactly how net household income impacts surplus income obligations. Automated totals show projected monthly payments transparently prior to trustee submission.

05

Direct Bank & Card Data Synchronization

Connect chequing, savings, and credit accounts safely. Weekly automatic background updates keep transaction data current without demanding manual spreadsheet uploads.

06

Trustee Profile Data Management

Maintain accurate contact details, household size, and employment information. Enable Licensed Insolvency Trustees to access verified user profile data seamlessly.

Three Bankruptcy Reporting Gaps

A detailed audit of manual bankruptcy procedures reveals critical gaps in record accuracy, receipt management, and statutory categorization.

SYSTEMIC REPORTING DEFICITS

Unresolved friction during monthly reporting creates operational overhead for insolvency trustees and heightens emotional stress for debtors.

Categorization Errors

Debtors frequently mix non-discretionary medical or child support payments with discretionary living expenses, distorting monthly surplus income figures calculated on statutory Form 65.

Missing Expense Proofs

Paper receipts for prescription medicines or court-ordered payments get misplaced easily. Without attached proof, trustees must reject claims or reclassify valid expenses.

Manual Sync Friction

Transcribing bank records line by line into paper forms leads to missed transactions. Debtors require automatic feed syncs to prevent accounting gaps prior to submission.

SOLUTION REQUIREMENT

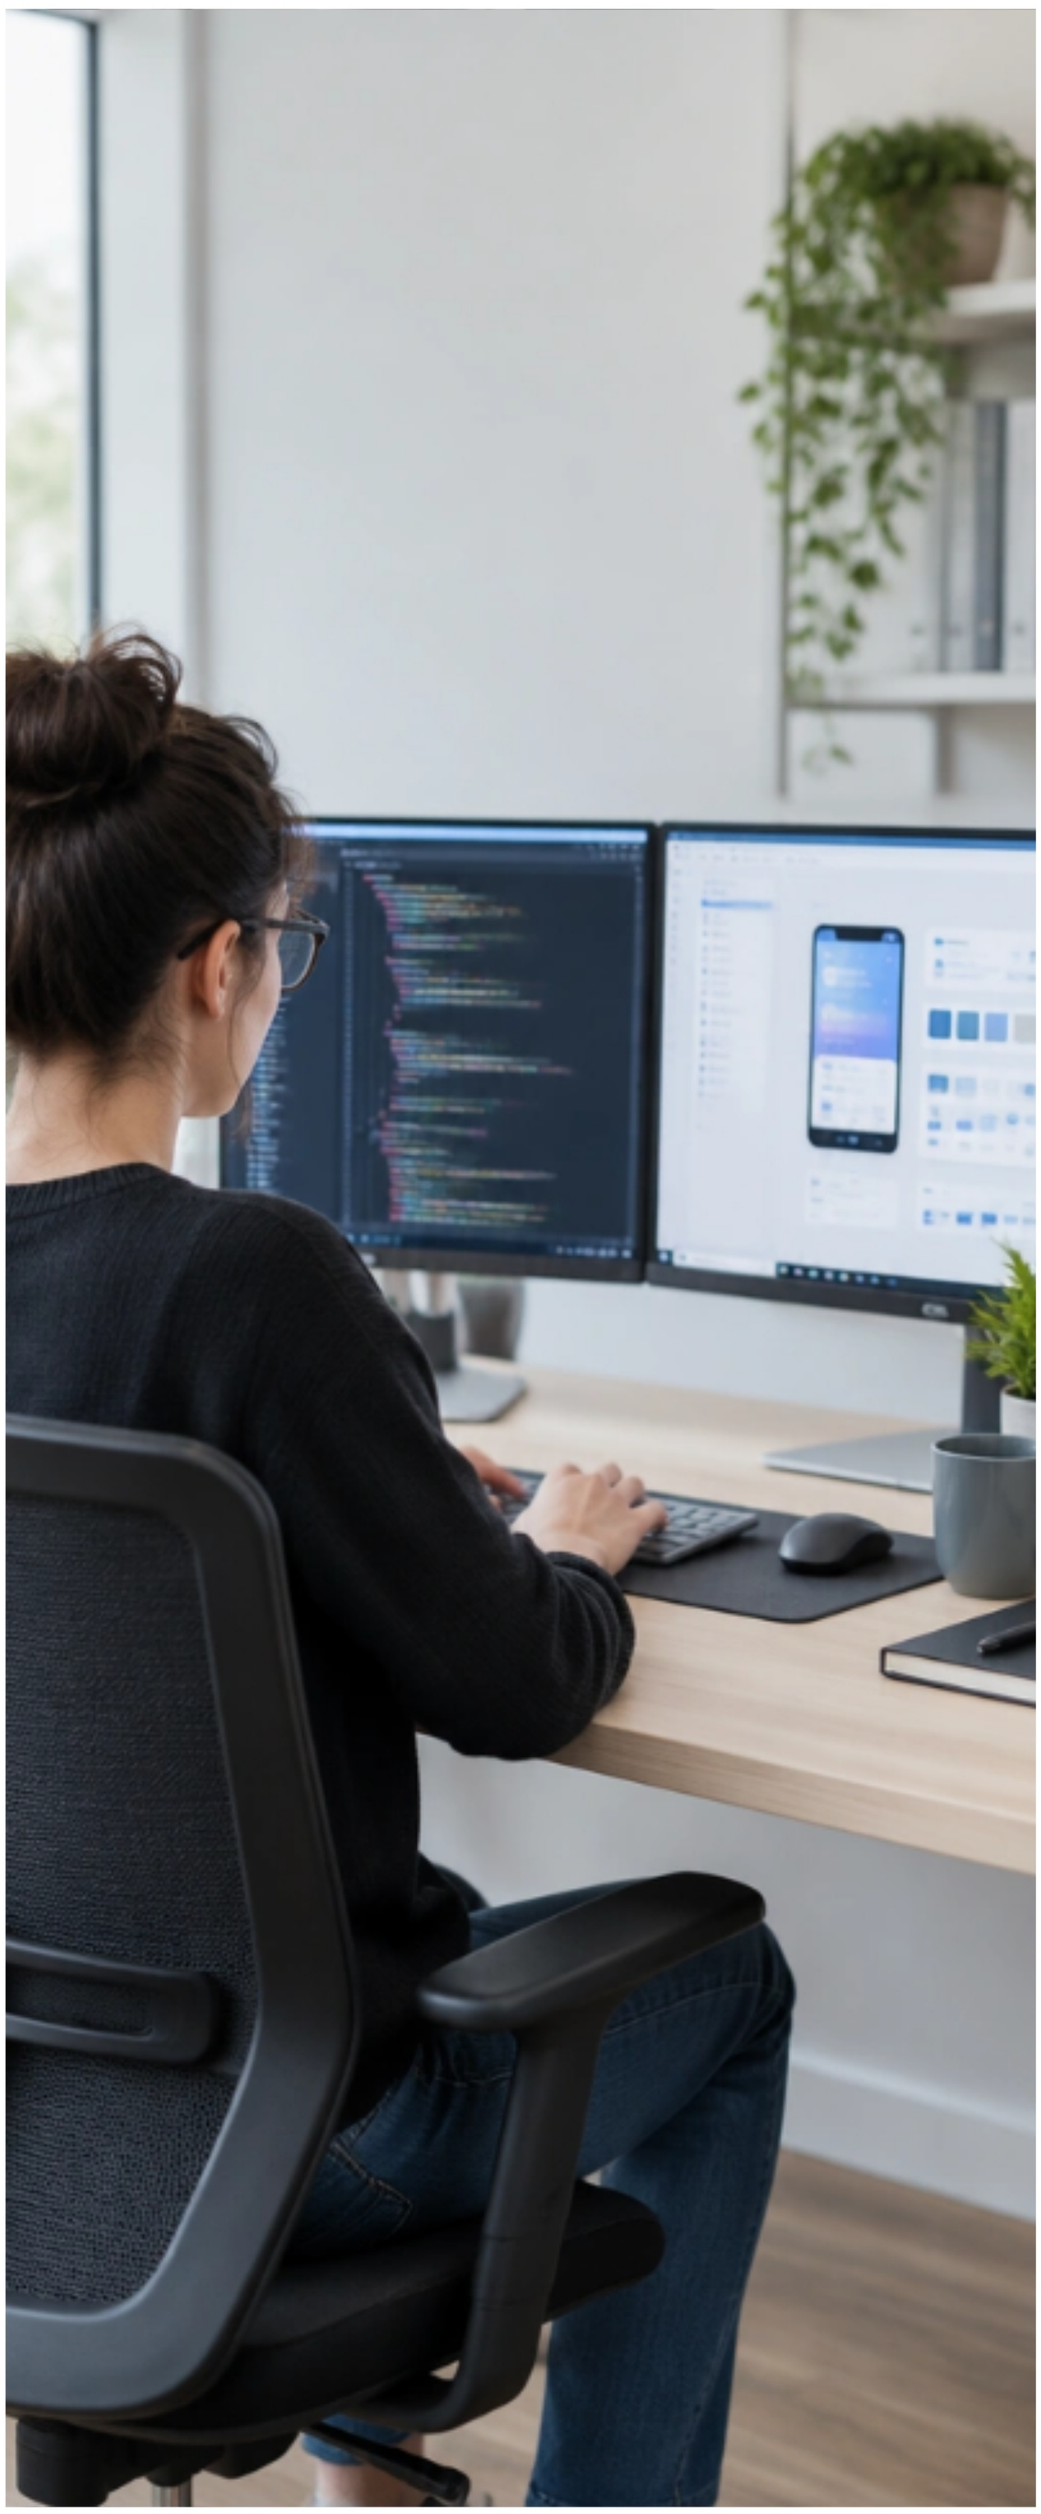
CleanSlate directly eliminates these three core failure modes by integrating auto-sync financial ledgers, AI category suggestions, and mandatory attachment prompts for statutory form lines.

Current Process vs CleanSlate

Comparing traditional paper-based insolvency reporting against CleanSlate highlights how automated software streamlines compliance for debtors.

CURRENT MANUAL PROCESS	CLEANSLATE DIGITAL PLATFORM
Paper Receipts & Spreadsheets Physical shoeboxes of paper receipts and manual spreadsheet logs lead to lost records and monthly reporting errors.	**Digital Receipt Vault** Mobile image uploads capture medical receipts instantly and attach proof directly to statutory report expense lines.
Manual Form 65 Filling Transcribing bank statements manually causes severe confusion over non-discretionary statutory deduction rules.	**AI Category Assistance** Machine learning classifies imported transactions automatically, prompting the user only when clarification is needed.
Delayed Bank Entry Waiting for paper bank statements creates reporting bottlenecks near the 15th monthly statutory deadline.	**Automated Weekly Sync** Connected bank accounts update transactions automatically every week, maintaining clean real-time ledger visibility.
Opaque Surplus Calculations Uncertainty over monthly surplus payments creates persistent anxiety for debtors trying to stabilize personal finances.	**Real-time Surplus Tracking** Live calculations display net income thresholds and required surplus payments clearly before trustee submission.

Product Engineering Approach



Our engineering methodology combines robust cloud data security with humane user interface design tailored for personal financial management.

SECURE BANK CONNECTIONS

Integrate financial aggregator APIs to establish read-only links with Canadian financial institutions, automating weekly feed synchronization seamlessly.

AI CATEGORIZATION ENGINE

Deploy natural language processing models to classify bank statement descriptions into Form 65 income and expense lines with user confirmation prompts.

STATUTORY FORM ACCURACY

Encode official Superintendent of Bankruptcy thresholds directly into form calculation engines to ensure exact surplus income payment determination.

HUMANE UX & CLARITY

Craft clear, non-judgmental user interface dialogs and helper tooltips to answer debtor questions during overwhelming insolvency proceedings.

Comprehensive Project Scope

EXECUTIVE SCOPE SUMMARY

The CleanSlate engineering project encompasses frontend application development, backend transaction intelligence services, secure bank API integrations, and statutory Form 65 reporting modules. The scope delivers eight core user features engineered specifically to assist Canadian personal bankruptcy debtors.

DELIVERABLE WORKSTREAMS

- Dashboard overview & monthly status cards
- Monthly report historical ledger & Form 65
- Complete monthly report step-by-step wizard
- Bank statement upload & AI categorization
- Receipt and prescription vault storage
- Bank Account & card auto-sync service
- Transaction category assignment tools
- User Profile editor for trustee information
- Automated weekly background bank syncing
- Manual sync button for on-demand fetch
- Receipt-to-transaction line linking engine
- Non-discretionary expense attachment checker
- Household surplus income calculator
- Trustee PDF report compiler and exporter

OUT OF SCOPE

Direct legal representation, insolvency trustee licensing software, commercial corporate restructuring modules, and automated debt payment settlement transactions are strictly excluded.

REQUIRED INPUTS

Provision of sample bank transaction exports, trustee Form 65 calculation parameters, sandbox banking aggregator credentials, and UX brand guidelines.

Core Application Services

Eight fundamental system services power the CleanSlate web application, ensuring automated financial tracking and effortless compliance.

Dashboard Summary

Centralized hub summarizing outstanding reports, average spending, current monthly payments, latest transactions, and bank account balances.

Monthly Report Manager

Historical ledger tracking draft, submitted, and overdue monthly reports sent to the Licensed Insolvency Trustee during the bankruptcy period.

Form 65 Guided Wizard

Multi-step form wizard covering Household Income, Non-Discretionary Expenses, and Discretionary Living Costs with statutory total calculations.

AI Statement Parser

Upload bank statements to auto-categorize expenses via AI, with interactive user prompts to clarify ambiguous transaction descriptions.

Receipt & Proof Vault

Upload and store receipts including prescription medical proofs, linking document images directly to corresponding report expense lines.

Bank Account Syncing

Connect bank accounts and credit cards with automatic weekly transaction feeds and a manual Sync Bank Accounts button for real-time updates.

Categorize Engine

Assign transactions to Form 65 income and expense sections, training the system to auto-categorize similar recurring vendor transactions.

User Profile Management

Manage debtor contact details, employment status, employer address, and household size required by Licensed Insolvency Trustees.

Core Modules Delivered

CleanSlate delivers six key user interface modules carefully matched to the wireframes and functional specs. Each module provides specific compliance tools to help debtors track income, categorize expenses, and submit flawless Form 65 reports directly to insolvency trustees.

Dashboard Module

Displays outstanding report alerts, average spending cards, recent ledger transactions, and synced bank account balances.

Monthly Report Module

Houses historical report logs alongside multi-step Form 65 sections for Income, Non-Discretionary, and Discretionary expenses.

Receipt Storage Module

Captures and stores uploaded document images, attaching medical prescription receipts directly to statutory expense claims.

Bank Syncing Module

Connects bank accounts and credit cards to automatically sync transactions weekly or instantly via a manual trigger button.

Categorize Tool

Allows users to review and assign unclassified bank ledger items, building automated rules for recurring vendor payments.

User Profile Module

Manages core profile fields including contact details, residential address, employment history, and trustee record links.

Responsibilities Matrix

A clear division of responsibilities ensures smooth system implementation and alignment between technical development and product ownership.

ENGINEERING TEAM ROLE	PRODUCT OWNER ROLE
Full Platform Engineering Deliver web application frontend, backend server, database architecture, and security protocols.	**Business Requirements** Provide statutory Form 65 business logic rules, surplus thresholds, and UI design mockups.
Bank API Integration Implement secure banking aggregator integrations for automated background transaction feeds.	**Third-Party Credentials** Supply banking aggregator API development accounts, cloud hosting access, and domain records.
AI Parser & QA Testing Build AI categorization engines, conduct unit testing, and resolve software bug tickets promptly.	**Acceptance Verification** Perform user acceptance review across all delivered modules within five business days of release.

Application Workflow Architecture

CleanSlate guides users through a structured five-step digital workflow to ensure total data accuracy and compliance.

01

Account Setup & Bank Syncing

The debtor completes profile setup under User Profile and connects bank accounts and credit cards to establish automatic weekly transaction feeds.

02

Statement Parsing & AI Classification

Bank statement uploads or live feeds are processed via AI. Ambiguous ledger items prompt the debtor for instant clarification in Categorize.

03

Receipt Upload & Attachment Linking

The debtor uploads photos of medical prescriptions and child support receipts into Receipts, linking proof directly to non-discretionary expenses.

04

Form 65 Compilation & Surplus Calculation

The system populates monthly household income and expense forms automatically, running statutory calculations to show required surplus income payments.

05

Trustee Report Submission & Filing

The debtor reviews final monthly totals and submits verified reports directly to their Licensed Insolvency Trustee ahead of the 15th statutory deadline.

Delivery Milestones

The engineering roadmap is structured into five distinct phases, moving systematically from core design architecture to final platform deployment.

PHASE 1 · MONTH 1

UI/UX & Database Architecture

Finalize User Profile, Dashboard, and Monthly Report wireframe designs. Establish relational database schemas for Form 65 income and expense lines.

PHASE 2 · MONTH 2

Bank Sync & Auto-Categorization

Build secure banking aggregator API integrations for automated weekly feed syncing. Implement machine learning transaction statement parsers in Categorize.

PHASE 3 · MONTH 3

Receipt Vault & Proof Attachments

Develop secure document storage vault. Enable receipt image uploads for medical prescriptions and non-discretionary proofs linked to report lines.

PHASE 4 · MONTH 4

Form 65 & Surplus Calculation Engine

Encode official Canadian insolvency surplus income thresholds. Automate Form 65 multi-step wizard compilation and trustee PDF report exports.

PHASE 5 · MONTH 5

Testing & Platform Deployment

Conduct end-to-end security penetration testing, bank sync sandbox QA, user acceptance review, and production cloud infrastructure launch.

Project Implementation Schedule

WORKSTREAM	PHASE 1	PHASE 2	PHASE 3	PHASE 4
Architecture & UI Database schema definition and Form 65 user wireframes.	✓			
Bank Sync Service Banking aggregator API links and weekly auto-sync tasks.		✓		
AI Statement Parser Transaction machine learning and user prompt dialogs.		✓		
Receipt Storage Vault Prescription receipt uploads linked to non-discretionary lines.			✓	
Form 65 & Surplus Engine Statutory calculations and trustee PDF export generation.			✓	
QA & Cloud Deployment Penetration testing and production server rollout.				✓

Implementation phases represent sequential development sprints across a total 20-week delivery schedule.

Project Terms And Conditions

The following operational clauses govern the technical engineering, intellectual property, and acceptance guidelines for the CleanSlate application.

01. Engineering Scope

All development work aligns strictly with the specified eight application modules. Scope additions will be documented under formal change requests.

02. Scope Change Governance

Modifications to statutory Form 65 calculations or third-party bank sync APIs will be evaluated for impact on the implementation schedule.

03. Module Acceptance

Each completed milestone phase undergoes user acceptance testing against wireframe specifications prior to advancing to subsequent sprints.

04. Intellectual Property

Upon project completion, all proprietary application code, AI categorization training rules, and interface assets transfer fully to the project owner.

05. Privacy & Data Security

Debtor personal financial records, medical prescription attachments, and bank credentials are secured with bank-grade encryption at rest and in transit.

06. Product Owner Inputs

Timely provision of sandbox API keys, sample statement exports, and statutory calculation parameters is required to maintain delivery schedules.

07. Warranty & Defect Support

Engineering support includes bug resolution for ninety days post-launch, ensuring calculations conform exactly to Form 65 requirements.

08. Project Termination

Either party may terminate agreement upon written notice. Completed code repositories and database assets built to date will be transferred.

NEXT STEPS

This proposal remains open for acceptance. To authorize project kickoff, sign and return the acceptance form on the following page.

01

Review Proposal

Examine scope and milestone deliverables.

02

Sign Acceptance

Complete written sign-off on the next page.

03

Project Kickoff

Initiate Sprint 1 architecture setup.

Acceptance Form

By signing below, the project owner authorizes the scope, technical architecture, and delivery schedule detailed in this CleanSlate application proposal. Please return the signed form to confirm project commencement.
